

Blended Learning the Focus of Upcoming Citrix GoToMeeting Webinar

Technology to create effective blended learning programs keeps expanding. Understanding ways to focus and combine tools is critical to taking advantage of today's Internet applications to enhance employees' skill sets while minimizing time to productivity.

Falls Church VA, (October 2006) Dr. Bill Bruck, co-founder and lead solutions architect of Q2Learning will deliver a webinar focused on decreasing time to proficiency using state-of-the-art technologies in blended learning.

Learners will benefit from Dr. Bruck's experience in creating learning programs for fortune 500 corporations, and will learn:

- How to match the type of skill with the type of learning intervention
- When to use coaches and mentors - and how to get management to release their time
- How to leverage collaboration technologies to scale and manage blended learning programs

"Too much blended learning focuses on the technology, and not the requisite skills," says Dr. Bruck. "The real key to successful blended learning programs is understanding what you want to accomplish, then matching your technology towards your goals."

One of the biggest challenges learning departments face is find ways to help learners effectively absorb and then apply information over time. Blended learning offers advantages that both traditional ILT and WBT lack.
