

xPERT eCampus 4.3.3 Customizes Collaboration Features More Than Ever Before

Falls Church, VA, (March 2007) Q2Learning, the leading provider of enterprise software for collaborative learning and knowledge sharing, announced today the release of xPERT eCampus v. 4.3.3, with even more configuration options, simplified day-to-day management capabilities, and greater integration synchronous collaboration tools.

“It’s not enough to let organizations upload a logo and call a site branded,” says Bill Bruck, lead solutions architect and founding partner of Q2Learning. “Our customers are looking for ways to differentiate their collaboration sites and match the functionality to their user’s specific needs, without the overhead and expense of customization. The eCampus’ configurability has always been a central focus of our development efforts, and this new release continues this commitment.”

In addition to enhanced configuration ability, version 4.3.3 also provides a new site manager role which allows organizations to delegate day-to-day site administration tasks without requiring in-depth knowledge of system administration. There is also a deeper integration with Windows and MSN messenger, enabling participants to collaborate even better in real time.

About Q2Learning, LLC

Q2Learning is the leading provider of enterprise software for collaborative learning and knowledge sharing. The company’s xPERT eCampus platform, winner of the 2004 gold Brandon Hall award for innovative technology, drives mastery learning by weaving electronic content, web meetings, practice assignments and private mentoring into collaborative workspaces.
